

Prevents Mastitis and Its Economic Losses

A judicious combination of trisodium citrate with a highly biologically active Copper-Zinc-Yeast supplement to protect cows from mastitis.

Subclinical mastitis in the cows is the inflammation of the udder involving the secreting cells of the mammary glands or their connective tissues or both.

Keratin is the substance that makes the lining of teat-end opening. The keratin lining entraps and destroys mastitis causing bacteria. Dugcare helps formation of keratin lining.

BENEFITS

- Helps formation of keratin lining.
- Reduces somatic cell counts.
- Reduces lactate hydrogenase activity.
- Optimizes milk production.
- Maintain good udder health and pH level.

DOSAGE

50 g / Day / Animal

or

as directed by Veterinarian / Nutritionist

COMPOSITION

- Organic zinc
- Organic copper
- Organic Selenium
- Vit-A
- Vit-E
- Trisodium citrate

PRESENTATION

250g pouch

DUGCARE
