

Optimal Management of Hypocalcaemia

Ostalin is an optimal support for hypocalcaemia prevention and reduces the risk of ROP & milk fever.

Ostalin contains highly bioavailable calcium sources for a prolonged improvement on calcium metabolism. Highly bioavailable Mg source ensures better mobilisation of calcium and improved milk production with reduced metabolic disorders. Ostalin is fortified with Vit. D3 along with niacin which help better absorption of calcium with improvement in milk production. Natural herbs like Galega officinalis, Shatawari and javanti help in milk enhancement and early milk let down.

BENEFITS

- As supportive measure against hypocalcaemia, administer Ostalin 6 to 12 hours before the expected calving / lambing.
- To support milk fever therapy Ostalin can be administered 4 to 6 hours after calcium injection. Another dosage may be given after 6 to 12 hours.

COMPOSITION

Calcium and Magnesium salts, Vit. D3, Niacin & Natural Herbs

DOSAGE

Dairy cows: 300 ml/day | Sheep & goats: 100 ml/day
or as directed by Veterinarian / Nutritionist

PRESENTATION

300 ml bottle

Ostalin
